

StreamlyTV is committed to making our products and services accessible and usable by all. As part of that commitment, we adhere to Generally Accepted Standards relating to accessibility into our web design, development, and quality assurance procedures. Our goal is to do our best to ensure our products and services provide an equitable, accessible experience for all customers. Given that StreamlyTV is effectively an app-based content provider, we can only have an effect on the product we produce. We have no ability to control or enhance content created by others and shared to viewers of our platform.

Mobile Access

The wide array of mobile devices makes creating a uniform accessible experience challenging. StreamlyTV is committed to identifying and enhancing accessibility issues both as we develop, but also as issues are identified.

Web Content Accessibility Guidelines 2.1

StreamlyTV incorporates the Web Content Accessibility Guidelines 2.1 (or WCAG 2.1) authored by the World Wide Web Consortium (W3C) into development of our web and mobile platforms. The WCAG has three levels of compliance, A, AA, and AAA, and our goal is for all our digital products and services to meet or exceed the AA level of compliance.

StreamlyTV strives to follow these commitments for our web presence online. :

Make all digital content perceivable:

- images and page controls are properly labeled and alt texted
- color is used as a supplement to other methods of conveying information
- colors are sufficiently contrasting against one another
- pages can reflow, zoom, and resize without loss of information

Make all digital content “usable:”

- all parts of a page can be operated without the use of a mouse, whether by a keyboard or a mouse replacement like a sip and puff tube or wireless switch control
- content on each page has a logical flow
- section headings and html landmarks used effectively

Make all digital content understandable:

- html language declarations are present on every page
- visible focus indicators show when a keyboard user has focused on an operable page control
- page elements only activate on user input

Internal Practices

To work towards our commitment to accessibility, StreamlyTV has made accessibility an essential part of our development process. By making use of both in-house and third-part

accessibility quality assurance testers and subject matter experts, StreamlyTV has made accessibility a component of all development projects.

Platform Compatibility

StreamlyTV's website is designed to be compatible with recent versions of popular screen readers, screen magnification software and operating system features, and recent versions of all major web browsers.

Contact Us

We welcome feedback on our sites. If you have a suggestion as to how we can make a page more accessible, need help with an accessibility question, or encounter an accessibility barrier on a StreamlyTV website, please contact us at accessibility@streamlytv.com.
